The Mini Dell, Midi Dell & Dell

Midi Dell on the move

The Dell is one of our most popular ranges for small numbers of garden chickens. There are 3 sizes in the range to house from 2 – 12 chickens.

The Dells are complete with integrated runs so that you can keep your chickens enclosed if required. They have raised living accommodation, this makes them easier to clean and helps prevent vermin problems. This also gives the chickens shelter under the house, and somewhere to keep the feed dry.

Carrying poles run throughout the building so they can be moved around, and they also double up as day time perches for the chickens.

There is a lift off door to access the house area. Inside the house there is a block of removable perches. The nest box is on the back of the house and is accessed from the outside to collect the eggs. Either side of the ridge there is a vent for good air circulation.

There is a vertical sliding pop hole on the front of the house and a ladder for the chickens to access the run. There is also a wire door on the run for putting in feed and water and closing the pop hole down.
