Mackworth 8 x 4 showing pull out floors

Mackworth 10' x 5'

Inside the Mackworth

Mackworth 8' x 4' showing optional onduline roof over house

Mackworth 10' x 5'

The Mackworth is very unlike our other houses in that it is built on legs, for this reason it is also made out of slightly heavier weight timber than our other small chicken houses. It's ideal for backyards and situations where you may wish to site the building in one place on a more permanent basis as it is heavy it can't be lifted around. We build the Mackworth in 2 sizes to house between 10 – 20 chickens depending on size.

The house and the run have a covered roof to keep the building dry and give the chickens shelter. The house area has a wooden and felt roof (this can be onduline if preferred) and the run area is covered in corrugated perspex to

allow plenty of light through. Both the house and the run have wooden floors which can be pulled out through drop down wooden shutters on the front. This makes the Mackworth very easy to keep clean. The chickens can be let out to free range by dropping down the ladder at the end of the run.

There are access doors on the front of the house and the run. There is also a window on the front of the house for ventilation and to let light inside. There is a block of raised removable perches inside the house which sit above the nest boxes. The nest boxes are on the side of the house, they are accessed from the outside for collecting the eggs.
